These were about twice as large, heavy, and bulky is the LOTZ unit and gave no better results. The upshot was governounit. These were about twice as large, heavy, and bulky is the LOTZ unit and gave no better results. The upshot was hat governounity was poorly trained to find out here the trouble was. GUYENOT formerly worked on the A-1 pparatus and really was poorly trained to take over the electron icroscope. GOERLICH, BRAUN, ROHRTANZ, and ERLER all f whome actively embraced the Soviet ideology in Krasnogorsk increased to seize power and communize the Zeiss workers. BRAUN a personnel leader; GOERLICH and ROHRTANZ are chiefs in the chemitific section.	50X1-HUM 50X1-HUM
these produced at Zeiss, Jena. The monthly demand sometimes ran is high as 80 per month. There was a great deal of friction between the foreman of the electrical power supply shop and the leader of the electron dicroscope design work. GUYENOT had charge of the latter, and cotton dicroscope design work. GUYENOT had charge of the latter, and cotton dicroscope be operated at 50,000 volts, but sparking they took place when the potential exceeded 20,000. It was deped and claimed by some that the instrument gave a magnification of 20,000 but in reality 4,000 was rarely exceeded. GUYENOT unsisted that the accessories made by LOTZ were at fault, so that the accessories made by LOTZ were at fault, so that AEG, Berlin, and Eoch and Stersel, Dresden, each build power unit. These were about twice as large, heavy, and bulky is the LOTZ unit and gave no better results. The upshot was appointed to find out here the trouble was. GUYENOT formerly worked on the A-1 pressure and really was poorly trained to take over the electron icroscope. GOERLICH, BRAUN, ROHRTANZ, and ERLER—all f whome actively embraced the Soviet ideology in Krasnogorsk—ill try to seize power and communize the Zeiss workers. BRAUN a personnel leader; GOERLICH and ROHRTANZ are chiefs in the	50X1-HUN
